**CONTROL 1**

This new unit from Prentke Romich represents a new generation in environmental control. It is a system that permits people with severe physical impairment to operate various electrical devices in their surroundings. It provides for control of AC powered appliances, telephone, electric bed and other functions such as television channel selection, door opening, intercom, power drapery control, nurse call and more. Two switch scanning input and Morse Code input can be implemented through the use of a hand-held computer, purchased separately. An optional wireless data link permits operation from a wheelchair without having to be connected to the Control 1. Betacom is pleased to announce that it will be marketing this unit for Prentke Romich. We are their Canadian distributor.
